

What Downtime can cost Your Business

Did you know

A single FAILURE EVENT can cause

- Lost transactions
- Days or Weeks of wasted labor hours
- Weakened client trust
- Complete loss of crucial data

What Disaster Recovery Does for You

Disaster recovery provides a second version of your system you can fall back on no matter what goes wrong. In the event that hardware failure, malware, or any disaster takes out your primary system, you

can keep going on the second. Instead of rebuilding a whole system to access various files in the cloud, you can go back to work immediately.

You're down and losing money. Here's how much.

Fill in the blanks in the calculator below to figure out what downtime costs your business. Once you see what the cost can be, it's easy to see why disaster recovery services aren't just nice to have, they're a necessity.

Number of employees:

Average employee wage per hour:

Total labour cost per hour:

Average % of lost productivity:

(percentage of workforce affected by downtime)

Once you have that, you need the amount of revenue you lose per hour. Fill out these values:

Gross annual revenue:

Days per year open for business:

Total revenue lost per hour:

Hours per day open for business:

Total hourly downtime cost:

Next, think about how long a downtime event would likely last.

Duration of downtime (hours):

Total cost of one downtime event:

Remember

Some businesses never come back from downtime caused by small and large disasters alike.

This isn't merely backup. This is disaster recovery.
