The next-generation of Cloud Backup

Never lose Office 365 and G Suite data, recovery ANYTIME, ANYWHERE.
No software to install or infrastructure to manage.

For more than a decade, IT administrators have been trusting StorageCraft for their backup and recovery needs in traditional systems. Now, StorageCraft is taking the same speed and reliability to online hosted cloud-to-cloud environments to better equip our partners with the changing business continuity needs of customers today.

Restore in seconds
Cloud Backup restores objects, folders, and users easily and quickly to ensure business continuity and access to critical data.

Cross application recovery
Restore from one application to another. For example, restore G Suite email to O365, OneDrive to Box.

True 'set and forget' technology
Once an account is configured, there is no need to actively engage with Cloud Backup unless a restore or export is needed.

Single sign-on for easy management
One management portal for all customer accounts: no need to log in and out of each account.

Secure data
Backups are scheduled 3 times a day to meet user specifications. This data is protected and encrypted and stored in Amazon S3 regional data centres.

Self-service
No need to wait, submit a ticket, call SaaS support, etc. Just find and restore the content you need when you need it.
